

# WAS YOUR HOME BUILT BEFORE 1978?

## Lead-based paint is found in a significant number of homes in Maine built before 1978.

Lead-based paint exposure can be especially toxic to children under six years old.

MaineHousing wants all homeowners, landlords and residents to be knowledgeable about the hazards of lead poisoning, preventative measures and how to make their home safe.

For more information on how to keep your family safe and have lead paint in your home properly abated, contact your local Community Action Agency.
