Televisions

Keyboard

Computer Speakers

Printers

Scanners

In the past, no one thought of recycling computers and other electronics. But these days engineers have taken notice that electronics usually contain a wealth of valuable materials. Plus, recycling almost always means lower net carbon emissions that would normally be emitted while manufacturing a new product. Finally, electronics are made with a sizable amount of lead, cadmium, brominated fire retardants and plastics that can leach toxic breakdown products — that's stuff no one wants in their water supply! Recycling electronics is good for the environment and our local communities.

If you have any questions about whether your electronic device can be recycled at the Bucksport Transfer Station, feel free to contact us at 469-7496.

Nationally, approximately 2.8 billion pounds (1.4 million tons) of electronic equipment were recycled in 2006, including 65 million units of computer equipment (CPUs, monitors, and printers). The electronics recycling process yielded 1.3 billion pounds of recyclable materials, more than half of which were metals. Consumer electronics alone are now considered to be approaching more than 3 million tons generated annually.
